

### What is MediShares?

MediShares is the first global mutual aid marketplace on the blockchain. It combine the traditional mutual aid model with blockchain and smart contract which provide a low operation cost and guarantee of compensation for risks.

### Advantages of Decentralization

Trustless

Low Operational Cost

Incentive System

Value Sharing

Global Marketplace

### Phase I 2017 ~ 2018

Virtual Health Insurance

MediShares team has created the largest mutual aid platform 'Zhongtopia' which has more than 10 million users.

Virtual health mutual aid can reduce 99% operation cost compare to tradition insurance model, and also without location restrictions. It will build a real inclusive blockchain application.

Virtual Property Insurance

Blockchain technology is known for building trustless application, but for OTC market, it still need trust between people.

MediShares virtual property mutual aid can solve this problem, also the MDS token holder will be the policy holder as well.

### Phase II 2018 ~ 2019

**IDcard.ONE**  
KYC on blockchain and also protect privacy

**Smart Contract Factory**  
Help everyone to create secure smart contract easily

**BangBang.AI**  
Risk system on AI, using neural network algorithm helping claim verify process

House Renting Insurance

Anonymous Illness Insurance

Accident Insurance

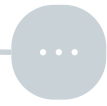

Cars Insurance

Disastrous Weather Insurance

Farmer Insurance

More...

### Smart Contract

Smart contract is the future insurance.

Smart contract guarantee of compensation based on code and algorithm.

Smart contract manage the token pool and reduce the risk of insurance fund.

### MDS Token

MDS Token accepted as payment for MediShares mutual aid.

MDS Token is also pledge to create a new contract.

MDS Token also reward the contract creator and promoter.

Due to fee payments and limited number of MDS, the market price will grow in the future.
